

Enterprise SAS Hard Drives

Improved performance and data integrity with SAS-based hard drives

Enterprise Serial Attached SCSI (SAS) hard drives from Lenovo offer the best combination of performance while providing the highest data integrity for server and external storage solutions. The 6 Gbps SAS interface provides double the data transfer rates over the previous generation and provide the scalability required by data centers worldwide.

SAS has become the hard drive interface of choice for enterprise-based storage solutions today. With full duplex, bidirectional I/O, these hard drives offer an average of 135 percent increased performance over SATA-based solutions and puts enterprise-class functionality within financial reach of businesses of all sizes.

In addition to its superior performance, SAS maximizes data integrity with end-to-end IT Nexus checking. This feature helps direct data moving to and from the drive, helping eliminate a key cause of data misdirection and corruption.
